

AI-Enabled Next-Generation Mystery Shopping Platform

Proposal for Phased Modernization & Development

Prepared for: HS Brands Asia

Prepared by: YOM Solutions

Date: March 13, 2026

1. Executive Summary & Vision

As the mystery shopping industry evolves, the expectation for faster, more accurate, and highly actionable insights has never been higher. The opportunity for HS Brands Asia lies in moving beyond traditional, manual data collection methods to a **fully integrated, AI-first mystery shopping ecosystem**.

Our vision is to partner with HS Brands to design and build a **next-generation, purpose-built platform** from the ground up. By leveraging mobile-first data capture, automated quality control (QC), and AI-driven validation, we aim to drastically reduce operational overhead, accelerate reporting turnarounds, and elevate the quality of insights delivered to your end clients.

This proposal outlines a phased approach to developing a custom suite—comprising a Shopper Mobile App, an Admin & Client Portal, and a Cloud AI Engine—ensuring a scalable and future-proof foundation for HS Brands.

2. The Challenge: Analyzing the Current Landscape

Based on our discussions, relying on fragmented manual processes, third-party tools, and spreadsheet/laptop-based reporting creates significant bottlenecks.

- **Inconsistent Data Collection:** Manual entry leads to incomplete or contradictory submissions.
- **Delayed Quality Control:** Invalid image uploads or poor responses are often discovered too late.
- **Reporting Bottlenecks:** Manual validation processes delay the delivery of final insights.

- **Lack of Scalability:** Expanding operations requires linear increases in manual QC headcount.
- **Limited Intelligence:** Current workflows do not leverage AI to extract insights from voice, images, or unstructured data.

3. The Solution: Core Platform Capabilities

To address these challenges, YOM Solutions proposes building a proprietary end-to-end platform tailored explicitly to the workflows of HS Brands, structured around three core pillars:

1

The Shopper Application (Mobile-First)

Designed to reduce friction and improve data accuracy in the field.

- **Location-Aware Tasking:** Intelligent, geo-fenced assignment suggestions.
- **Voice-to-Text Reporting:** Frictionless post-visit surveys powered by conversational AI.
- **Smart Submission Engine:** Real-time, on-device validation to catch missing fields.
- **Automated Media Checks:** On-the-fly verification of image quality.

2

The Validator & Admin Dashboard (Web-Based)

Built to supercharge the QA team and streamline program management.

- **AI-Assisted Quality Control:** Auto-flagging of suspicious or incomplete submissions.
- **Smart Review Queues:** Intelligent prioritization of reviews based on urgency.
- **Operational Command Center:** Real-time visibility into validation statuses.

3

The Cloud AI Foundation

The secure, scalable backend powering the ecosystem.

- **Centralized Data Lake:** Secure storage for multimedia, audio, and structured data.
- **Scalable Processing:** Cloud infrastructure designed to handle peak reporting periods.
- **Enterprise-Grade Security:** Role-based access controls and strict data privacy compliance.

4. Indicative Investment & Effort

Developing a custom, enterprise-grade platform requires a blended team of Product Leads, Mobile / Cloud Engineers, UI/UX Designers, and AI Specialists.

Development Phase	Focus Area	Estimated Effort (Hrs)
Phase 1: Blueprint & Design	Architecture, UI/UX Prototypes, Planning	40–60
Phase 2: Shopper App & Backend	Mobile app, submission flows, databases	260–420
Phase 3: QC Automation & Admin	Web dashboard, AI validation engines	140–240
Phase 4: Intelligence & Analytics	Advanced routing, reporting integrations	160–280
Phase 5: Pilot & Stabilization	UAT, bug-fixing, deployment	60–100
Total Estimated Effort		660–1,100

5. Commercial Structure Options

Option A: Time and Materials (T&M)

Option B: Phased Fixed Scope

Best suited when exact feature scopes and migration requirements are expected to evolve dynamically during development.

Structure: Billed transparently based on actual hours consumed, offering maximum flexibility in pivoting priorities.

Best suited for milestone-based budgeting with strict stage-gates.

Structure: Fixed fee for Discovery (Phase 1). Subsequent phases are quoted at a fixed price upon mutual agreement of the phase's finalized blueprint.
